RECOVERY WEEK

Saturday: **Victory Lap**

BASE PHASE: All Aerobic training. Low intensity and low heart rate to lay foundation for the rest of training period. IN THIS PHASE ALL MILES ARE AEROBIC. Aerobic running is 60-90 seconds per mile slower than race pace or whatever pace it takes to be sure you are running while breathing easy, talking in full sentences and feeling like you can keep going for more miles.

BUILD PHASE: Increase of weekly mileage and intensity. We will begin to do race pace workouts and targeted workouts that engage anaerobic running. See definitions to better understand anaerobic running.

PEAK PHASE: The most intense phase of marathon training.

TAPER PHASE: Congratulations! The hay is in the barn. The hard part of training is over. Now it's time to recover. The next 3 weeks you will have a gradual exponential taper where you wind down in mileage and intensity.

CUTBACK WEEK: Mileage reduction so that your body adapts to the load of the last 4 weeks of training. Your body needs to recover and adapt. Your legs will get stronger as you go through the cycle of training and adapting. This week will also allow your muscles to grow stronger before we move to the next phase.

AEROBIC PACE: an intensity where you feel you could run forever; you can talk without noticeable pauses for breathing; usually 60-90 seconds per mile slower than race pace.

RACE PACE: the speed or pace you are training for and plan to run during your race

ANAEROBIC PACE: High intensity where your body doesn't have enough oxygen to sustain for very long. Often done during interval training.

10K PACE: a moderately hard run that can be sustained for 6 miles. It is 85% of your maximum capacity. See pace chart below.

PROGRESSION RUN: A run with structure pace that increases from beginning to end

Example: *Run 2 miles 15 seconds slower than Race Pace, then 2 miles at Race Pace, and 1 mile 15 seconds faster than Race Pace.*

CROSS-TRAIN: anything other than running (biking, swimming, strength training, yoga)

SPEED WORK: These are workouts that improve foot speed and cardiovascular strength. Also called "repeats" or "intervals". A repeat is a fast, short segment of running that is repeated throughout the workout. For each speed workout, do a 1 mile warm up (at an easy pace) and a 1 mile cool down (at an easy pace). During the "rest" times, you are jogging around the track before the next interval. Note, 400 meters = 1 lap around a track or 0.25 miles on your Garmin
